FCC TEST REPORT

for

85M HomePlug Wireless Ethernet

Broadband Router

Model No.: PR136g

of

Applicant: E-Top Network Technology Inc. Address: No.82, Gongye 2nd Rd., Tainan City 70095, Taiwan, R.O.C.

Tested and Prepared by

ETS Product Service (Taiwan) Co., Ltd.

FCC Registration No.: 930600

Industry Canada filed test laboratory Reg. No. IC 5679

A2LA Accredited No.: 2300.01

PTCRB Accredited Type Certification Test House

FCC ID: U6APR136G

Report No.: W6M20709-8526-C-1

6F, NO. 58, LANE 188, RUEY-KUANG RD., NEIHU TAIPEI 114, TAIWAN, R.O.C. TEL: 886-2-66068877 FAX: 886-2-66068879 E-mail: ets@ets-bzt.com.tw

FCC ID: U6APR136G

1 General Information

1.1 Notes

The purpose of conformity testing is to increase the probability of adherence to the essential requirements or conformity specifications, as appropriate.

The complexity of the technical specifications, however, means that full and thorough testing is impractical for both technical and economic reasons.

Furthermore, there is no guarantee that a test sample which has Passed all the relevant tests conforms to a specification.

Neither is there any guarantee that such a test sample will interwork with other genuinely open systems.

The existence of the tests nevertheless provides the confidence that the test sample possesses the qualities as maintained and that is performance generally conforms to representative cases of communications equipment.

The test results of this test report relate exclusively to the item tested as specified in 1.5.

The test report may only be reproduced or published in full.

Reproduction or publication of extracts from the report requires the prior written approval of the ETS Product Service (Taiwan) Co., Ltd.

Specific Conditions:

Usage of the hereunder tested device in combination with other integrated or external antennas requires at least additional output power measurements, spurious emission measurements, conducted emission measurements (AC supply lines) and radio frequency exposure evaluations for each individual configuration performed, for certification by FCC.

The test sample is able to work according IEEE 802.11 b/g.

This report is related to FCC Part 15 C (DSSS and OFDM device).

Tester:

October 17, 2007 Jay Chaing

Date ETS-Lab. Name Signature

Technical responsibility for area of testing:

October 17, 2007 Steven Chuang

Date ETS Name Signature

FCC ID: U6APR136G

1.2 Testing laboratory

1.2.1 Location

OATS

No.5-1, Shuang Sing Village, LiShuei Rd., Wanli Township, Taipei County 207, Taiwan (R.O.C.)

Company

ETS Product Service (Taiwan) Co., Ltd. 6F, NO. 58, LANE 188, RUEY-KUANG RD. NEIHU, TAIPEI 114, TAIWAN R.O.C.

Tel : 886-2-66068877 Fax : 886-2-66068879

1.2.2 Details of accreditation status

Accredited testing laboratory

A2LA accredited number: 2300.01

FCC filed test laboratory Reg. No. 930600

Industry Canada filed test laboratory Reg. No. IC 5679

PTCRB Accredited Type Certification Test House

1.3 Details of approval holder

Name : E-Top Network Technology Inc.

Street : No.82, Gongye 2nd Rd., City : Tainan City 70095, Country : Taiwan, R.O.C.

Telephone : ./.
Fax : ./.
Teletex : ./.

ETS Product Service (Taiwan) Co., Ltd.

Registration number: W6M20709-8526-C-1

FCC ID: U6APR136G

1.4 Application details

Date of receipt of test item : September 17, 2007

Date of test : from September 18, 2007 to October 15, 2007

1.5 General information of Test item

Type of test item : 85M HomePlug Wireless Ethernet Broadband Router

Model Number : PR136g
Brand Name : ETOP, Amigo

Hardware : V40 Software : 8225VF

Multi-listing model number : CHR-854(A) (Brand name: CNet);

PR-1118 (Brand name: Sapido)

Photos : See Appendix

Technical data

Frequency band : 2.4 GHz - 2.4835 GHz

Frequency (ch 1 or A) : 2.412 GHz Frequency (ch 6 or B) : 2.437 GHZ Frequency (ch 11 or C) : 2.462 GHz

Number of Channels : 11 Operation modes : duplex

Modulation Type : DSSS / OFDM

Fixed point-to-point operation: \square Yes $/ \boxtimes$ No Type of Antenna : PCB Antenna

Antenna gain : 2 dBi

Power supply : AC120V / 60Hz

Emission designator : DSSS: 14M8G1D

OFDM: 16M8W7D

FCC ID: U6APR136G

Host device: none Classification :

| Fixed Device | \boxtimes |
|--|-------------|
| Mobile Device (Human Body distance > 20cm) | |
| Portable Device (Human Body distance < 20cm) | |

<u>Transmitter</u> <u>Unom</u>

Mode A (DSSS)

Power (ch 1 or A) : Conducted: 21.09 dBm Power (ch 6 or B) : Conducted: 21.35 dBm Power (ch 11 or C) : Conducted: 21.95 dBm

Mode B (OFDM)

Power (ch 1 or A) : Conducted: 20.16 dBm Power (ch 6 or B) : Conducted: 20.39 dBm Power (ch 11 or C) : Conducted: 20.94 dBm

Manufacturer:

(if applicable)

Name : ./.
Street : ./.
Town : ./.
Country : ./.

Additional information: The sample is using WLAN technology according IEEE 802.11 b/g.

There are two testing modes in the test report.

Mode A: IEEE 802.11b Mode B: IEEE 802.11g

The scheme for frequency generation, spectrum spreading,

receiver parameters, synchronization procedure, and other parameters

are determined by the mentioned standard above.

1.6 Test standards

Technical standard: FCC RULES PART 15 SUBPART B / SUBPART C § 15.247 (2007-09)

FCC ID: U6APR136G

2 Technical test

2.1 Summary of test results

| No deviations from the technical specification(s) were ascertained in the course of the tests performed. | × |
|--|---|
| or | |
| The deviations as specified in 2.5 were ascertained in the course of the tests | |

2.2 Test environment

performed.

Temperature :23 °C

Relative humidity content : 20 ... 75 %

Air pressure :86 ... 103 kPa

Power supply : AC120V / 60Hz

Extreme conditions parameters : --

ETS Product Service (Taiwan) Co., Ltd.

Registration number: W6M20709-8526-C-1 FCC ID: U6APR136G

2.4 General Test Procedure

POWER LINE CONDUCTED INTERFERENCE: The procedure used was ANSI STANDARD C63.4-2003 using a 50µH LISN (if necessary). Both lines were observed. The bandwidth of the spectrum analyzer was 10 kHz with an appropriate sweep speed.

RADIATION INTERFERENCE: The test procedure used was according to ANSI STANDARD C63.4-2003 employing a spectrum analyzer. For investigated frequency is equal to or below 1GHz, the RBW and VBW of the spectrum analyzer was 100 kHz and 100kHz respectively with an appropriate sweep speed. For investigated frequency is above 1GHz, both of RBW and VBW of the spectrum analyzer were 1 MHz with an appropriate sweep speed. The analyzer was calibrated in dB above a microvolt at the output of the antenna.

FORMULA OF CONVERSION FACTORS: The Field Strength at 3m was established by adding the meter reading of the spectrum analyzer (which is set to read in units of $dB\mu V$) to the antenna correction factor supplied by the antenna manufacturer. The antenna correction factors are stated in terms of dB.

Example:

Freq (MHz) METER READING + ACF + CABLE LOSS (to the receiver) = FS

33 $20 \text{ dB}\mu\text{V} + 10.36 \text{ dB} + 6 \text{ dB} = 36.36 \text{ dB}\mu\text{V/m} \text{ @3m}$

The UUT was placed on a table 80 cm high and with dimensions of 1m by 1.5m (non metallic table) and arranged according to ANSI C63.4-2000 Section 13.1.2. The table used for radiated measurements is capable of continuous rotation. The spectrum was scanned from 30 MHz to the frequency specified as follows:

- (1) If the intentional radiator operates below 10 GHz: to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.
- (2) If the intentional radiator operates at or above 10 GHz and below 30 GHz: to the fifth harmonic of the highest fundamental frequency or to 100 GHz, whichever is lower.
- (3) If the intentional radiator operates at or above 30 GHz: to the fifth harmonic of the highest fundamental frequency or to 200 GHz, whichever is lower, unless specified otherwise elsewhere in the rules.
- (4) If the intentional radiator contains a digital device, regardless of whether this digital device controls the functions of the intentional radiator or the digital device is used for additional control or function purposes other than to enable the operation of the intentional radiator, the frequency range shall be investigated up to the range specified in paragraphs (a)(1)-(a)(3) of this section or the range applicable to the digital device, as shown in paragraph (b)(1) of this Section, whichever is the higher frequency range of investigation.

For hand-held devices, a exploratory test was performed with three (3) orthogonal planes to determine the highest emissions.

Measurements were made by ETS Product Service (Taiwan) Co., Ltd. at the registered open field test site located at No.5-1, Shuang Sing Village, LiShuei Rd., Wanli Township, Taipei County 207, Taiwan (R.O.C.) The Registration Number: 930600.

ETS Product Service (Taiwan) Co., Ltd.

Registration number: W6M20709-8526-C-1

FCC ID: U6APR136G

When an emission was found, the table was rotated to produce the maximum signal strength. At this point, the antenna was raised and lowered from 1m to 4m. The antenna was placed in both the horizontal and vertical planes.

When the radiated emission limits are expressed in terms of the average value of the emission, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.

The formula is as follows: Average = Peak + Duty Factor Duty Factor = 20 log (dwell time/T)

T = 100ms when the pulse train period is over 100 ms or the period of the pulse train.

Modified Limits for peak according to 15.35 (b) = Max Permitted average Limits + 20dB

FCC ID: U6APR136G

3 Test results (enclosure)

| TEST CASE | Para. Number | Required | Test passed | Test failed |

FCC ID: U6APR136G

3.1 Peak Output Power (transmitter)

FCC Rule: 15.247(b)(3)

This measurement applies to equipment with an integral antenna and to equipment with an antenna connector and equipped with an antenna as declared by the applicant.

The power was measured with modulation (declared by the applicant).

| 2400 – 2483.5 | 30 |
| 5725 – 5850 | 30 |

In case of employing transmitter antennas having antenna gain > 6 dBi and using fixed point-to point operation consider \$15.247 (b)(4)

Test equipment used: ETSTW-RE 003 ETSTW-RE 004 ETSTW-RE 055

Explanation: The diagrams for the peak output power measurements are included in Appendix.

FCC ID: U6APR136G

3.2 Equivalent isotropic radiated power

FCC Rule: 15.247(b)(3)

EIRP = max. conducted output power + antenna gain

EIRP = 21.95 dBm + 2 dBi

= 23.95 dBm

Limit: EIRP = +36 dBm for Antenna gain < 6dBi

Test equipment used: ETSTW-RE 003 ETSTW-RE 004 ETSTW-RE 017 ETSTW-RE 021

ETSTW-RE 028 ETSTW-RE 030 ETSTW-RE 043 ETSTW-RE 044

3.3 RF Exposure Compliance Requirements

FCC OET Bulletin 65 Edition 97.01 determines the equations for predicting RF fields and applicable limits.

The prediction for power density in the far-field but will over-predict power density in the near field, where it could be used for walking a "worst case" or conservative prediction.

$$S = \frac{PG}{4 \pi R^2}$$

S – Power Density

P – Output power ERP

R – Distance

D – Cable Loss

AG – Antenna Gain G = AG-D

| Item | Unit | Value | Remarks |
|------|--------------------|-----------|------------------|
| P | mW | 156.67511 | Peak value |
| D | dB | | |
| AG | dBi | 2 | |
| G | | 1.6 | Calculated Value |
| R | cm | 20 | Assumed value |
| S | mW/cm ² | 0.0499 | Calculated value |

Limits:

| Limit for General Population / Uncontrolled Exposure | | | | | | | | | |
|--|-------------------------------------|--|--|--|--|--|--|--|--|
| Frequency (MHz) | Power Density (mW/cm ²) | | | | | | | | |
| 1500 – 100.000 | 1,0 | | | | | | | | |

FCC ID: U6APR136G

3.4 Transmitter Radiated Emissions in Restricted Bands

FCC Rules: 15.247 (c), 15.205, 15.209, 15.35

Radiated emission measurements were performed from 30 MHz to 26500 MHz.

For radiated emission tests, the analyzer setting was as followings:

Frequency ≤ 1 GHz, RBW:100 kHz, VBW: 100 kHz (Peak measurements) Frequency > 1 GHz, RBW: 1 MHz, VBW: 1 MHz (Peak measurements) Frequency > 1 GHz, RBW:1 MHz, VBW: 10 Hz (Average measurements)

Limits.

For frequencies below 1GHz:

| Frequency of Emission | Field strength | Field Strength | | | |
|-----------------------|--------------------|-----------------------|--|--|--|
| (MHz) | (microvolts/meter) | (dB microvolts/meter) | | | |
| 30 - 88 | 100 | 40.0 | | | |
| 88 - 216 | 150 | 43.5 | | | |
| 216 - 960 | 200 | 46.0 | | | |
| Above | 500 | 54.0 | | | |

For frequencies above 1GHz (Average measurements).

Guidance on Measurement of Digit Transmission Systems:

"If the emission is pulsed, modify the unit for continuous operation, use the setting shown above, then correct the reading by subtracting the peak-average correction factor, derived from the appropriate duty cycle calculation."

The correction factor, based on the total channel dwell time in a 100 ms period, may be mathematically applied to a measurement made with an average detector, to further reduce the value.

Duty cycle correction = 20 log (dwell time/ 100ms)

Note: No duty cycle correction was added to the reading of this EUT.

Explanation: See attached diagrams in Appendix.

FCC ID: U6APR136G

3.5 Spurious Emissions (tx)

Spurious emission was measured with modulation (declared by manufacturer).

In any 100 kHz bandwidth outside the frequency band in which the intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in § 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in § 15.205(a), must also comply with the radiated emission limits specified in § 15.209(a) (see § 15.205(c))

FCC Rule: 15.247(c), 15.35

For out of band emissions that are close to or that exceed the 20 dB attenuation requirement described in the specification, radiated measurements were performed at a 3 m separation distance to determine whether these emissions complied with the general radiated emission requirement. Limits:

Max. reading – 20 dB

Guidance on Measurement of Digit Transmission Systems:

"If the emission is pulsed, modify the unit for continuous operation, use the settings shown above, then correct the reading by subtracting the peak-average correction factor, derived from the appropriate duty cycle calculation."

The correction factor, based on the total channel dwell time in a 100 ms period, may be mathematically applied to a measurement made with an average detector, to further reduce the value.

Duty Cycle correction = 20 log (dwell time/100ms)

For frequencies above 1GHz (Peak measurements). Modified Limit for peak according to 15.35 (b) = Max Permitted average Limits + 20dB

For frequencies above 1GHz (Average measurements). Max. reading -20dB

Note: No duty cycle correction was added to the reading of EUT.

Test equipment used: ETSTW-RE 003 ETSTW-RE 004 ETSTW-RE 017 ETSTW-RE 028 ETSTW-RE 029 ETSTW-RE 030 ETSTW-RE 042 ETSTW-RE 043

ETS Product Service (Taiwan) Co., Ltd.

Registration number: W6M20709-8526-C-1

FCC ID: U6APR136G

SAMPLE CALCULATION OF LIMIT. All results will be updated by an automatic measuring system in accordance with point 2.3.

Calculation of test results:

Such factors like antenna correction, cable loss, external attenuation etc. are already included in the provided measurement results. This is done by using validated test software and calibrated test system according the accreditation requirements.

The peak and average spurious emission plots was measured with the average limits.

In the Table being listed the critical peak and average value and exhibit the compliance with the above calculated Limits.

If in the column's correction factor states a value then the max. Field strength in the same row is corrected by a value gained from the "Duty-Cycle Correction Factor".

Summary table with radiated data of the test plots

Note

- 1. Correction Factor = Antenna factor + Cable loss Preamplifier
- 2. The formula of measured value as: Test Result = Reading + Correction Factor
- 3. All not in the table noted test results are more than 20 dB below the relevant limits.
- 4. See attached diagrams as appendix.

TEST RESULT (**Transmitter**): The unit DOES meet the FCC requirements.

Test equipment used: ETSTW-RE003 ETSTW-RE 004 ETSTW-RE 017 ETSTW-RE 028

ETSTW-RE029 ETSTW-RE 030 ETSTW-RE 042 ETSTW-RE 043 ETSTW-RE 044

FCC ID: U6APR136G

3.6 Radiated Emission on the band edge

According to FCC rules part 15 subpart C §15.247(c) in any 100 kHz bandwidth outside the frequency band in which the intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in § 15.209(a) is not required.

In addition radiated emission which fall in the restricted bands, as defined in section 15.205(a), must also with the radiated emission limits.

Mode A

| Test co | nditions | Attenuation at or outside band-edges | | | |
|-------------------------|---------------------------|--------------------------------------|-----------------|--|--|
| rest conditions | | Lower Band-edge | Upper Band-edge | | |
| T _{nom} = 23°C | $V_{nom} = 120 \text{ V}$ | 35.05 dB | 45.92 dB | | |

Mode B

| Test co | nditions | Attenuation at or outside band-edges | | | |
|-------------------------|---------------------------|--------------------------------------|-----------------|--|--|
| Test conditions | | Lower Band-edge | Upper Band-edge | | |
| T _{nom} = 23°C | $V_{nom} = 120 \text{ V}$ | 35.08 dB | 38.72 dB | | |

Limit:

| Frequency Range / MHz | Limit |
|-----------------------|---------|
| 902 –928 | |
| 2400 – 2483.5 | - 20 dB |
| 5725 - 5850 | |

Test equipment used: ETSTW-RE 003 ETSTW-RE 004 ETSTW-RE 017 ETSTW-RE 028 ETSTW-RE 030 ETSTW-RE 043 ETSTW-RE 044

Explanation: Please see attached diagram as appendix.

FCC ID: U6APR136G

3.7 Minimum 6 dB Bandwidth

The analyzer ResBW was set to 100 kHz. For each RF output channel investigated, the spectrum analyzer center frequency was set to the channel carrier. A PEAK reading was taken, two markers were set 6 dB below the maximum level on the right and the left side of the emission. The 6 dB bandwidth is the frequency difference between the two markers.

Mode A

| Test conditions | | 6 dB Bandwidth | | | |
|-------------------------|---------------------------|-----------------|-----------------|-----------------|--|
| | | Channel 1 | Channel 6 | Channel 11 | |
| T _{nom} = 23°C | $V_{nom} = 120 \text{ V}$ | 6.730769231 MHz | 6.762820513 MHz | 6.730769231 MHz | |

Mode B

| | Test conditions | | | 6 dB Bandwidth | | | |
|--|------------------------------------|--|------------------|------------------|------------------|------------|--|
| | | | | Channel 1 | Channel 6 | Channel 11 | |
| | T_{nom} = 23°C V_{nom} = 120 V | | 16.089743590 MHz | 16.250000000 MHz | 16.089743590 MHz | | |

Limits:

| Frequency Range MHz | Limits |
|------------------------|-------------|
| 902-928 | min 500 kHz |
| 2400-2483.5 | min 500 kHz |
| 5725-5850 | min 500 kHz |

Test equipment used: ETSTW-RE 003 ETSTW-RE 004 ETSTW-RE 055

Explanation: See attached diagrams in Appendix.

FCC ID: U6APR136G

3.8 Peak Power Spectral Density

Peak Power Spectral density is a measured at low, middle and high channel.

The peak output power is measured with a measurement bandwidth of 10 MHz and displayed on diagram together with Peak Power Spectral Density result which was measured with a bandwidth of 3 kHz, appreciate frequency span and sweep time.

Mode A

| | | Peak Power Spectral Density (3 kHz) | | | | |
|-----------------------|------------------------------------|-------------------------------------|-----------|------------|--|--|
| Test con | nditions | Channel 1 | Channel 6 | Channel 11 | | |
| | | [dBm] [dBm] | | [dBm] | | |
| $T_{nom}=23^{\circ}C$ | T_{nom} = 23°C V_{nom} = 120 V | | -9.67 | -9.05 | | |

Mode B

| | | Peak Power Spectral Density (3 kHz) | | | |
|-------------------------|---------------------------|-------------------------------------|--------|--------|--|
| Test con | nditions | litions Channel 1 Channel 6 | | | |
| | | [dBm] | [dBm] | [dBm] | |
| T _{nom} = 23°C | $V_{nom} = 120 \text{ V}$ | -13.95 | -13.63 | -13.18 | |

Limits:

| Frequency Range MHz | dBm |
|------------------------|-----|
| 902-928 | 8 |
| 2400-2483,5 | 8 |
| 5725-5850 | 8 |

Test equipment used: ETSTW-RE 003 ETSTW-RE 004 ETSTW-RE 055

Explanation: See attached diagrams in Appendix.

FCC ID: U6APR136G

3.9 Radiated Emission from Digital Part

According to FCC part 15.109 (g), digital devices may be shown to comply with the standards contained in Third Edition of the International Special Committee on Radio Interference (CISPR), Pub. 22, "Information Technology Equipment - Radio Disturbance Characteristics - Limits and Methods of Measurement".

Model: PR136g Date: 2007/10/8

Note

- 1. Correction Factor = Antenna factor + Cable loss Preamplifier
- 2. The formula of measured value as: Test Result = Reading + Correction Factor
- 3. Detector function in the form: PK = Peak, QP = Quasi Peak, AV = Average
- 4. All not in the table noted test results are more than 20 dB below the relevant limits.
- 5. See attached diagrams as appendix.

Except for Class A digital devices, the field strength of radiated emissions from unintentional radiators at a distance of 3 meters shall not exceed the following values:

| Frequency of Emission | Field Strength | Field Strength | | |
|-----------------------|--------------------|----------------------|--|--|
| (MHz) | (microvolts/meter) | (dBmicrovolts/meter) | | |
| 30 – 88 | 100 | 40.0 | | |
| 88 – 216 | 150 | 43.5 | | |
| 216 – 960 | 200 | 46.0 | | |
| Above 960 | 500 | 54.0 | | |

Test equipment used: ETSTW-RE 003 ETSTW-RE 004 ETSTW-RE 017 ETSTW-RE 028 ETSTW-RE 029 ETSTW-RE 030 ETSTW-RE 042 ETSTW-RE 043 ETSTW-RE 044

FCC ID: U6APR136G

3.10 Power Line Conducted Emission

For an intentional radiator which is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the table bellows with this provision shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminals.

This measurement was transact first with instrumentation using an average and peak detector and a 10 kHz bandwidth. If the peak detector achieves a calculated level, the measurement is repeated by an instrumentation using a quasi-peak detector.

| Enggyanay | Level (dBμV) | | | | | |
|-----------|------------------|------------------|--|--|--|--|
| Frequency | quasi-peak | average | | | | |
| 150 kHz | lower limit line | Lower limit line | | | | |
